Server Error -9 and -111 and -123

-111 is "□ %s□□□□□ %d" or Initialization of boundary %s failed%d
-123 is " Internal area is too small " or □□□□□□

These errors are usually issue with precinct.sev and/or region.sev or wrong settings in gs.conf for map boundaries. You can try replacing with the empty ones available in the VM's config folder (empty folder) if you have no way of editing or making these

Check in IDA Pro
85FFFFFFh = -123
91FFFFFFh = -111
